

ENVIRONMENTAL POLICY

Air transport brings people and goods together, but aviation also has an environmental downside. Noise, emissions and waste all have to be managed in a responsible manner. CASAIR recognises that we have a responsibility to the environment beyond legal and regulatory requirements.

We are committed to reducing our environmental footprint and making the continuous improvement of our environmental performance an integral aspect of our operating methods and business strategy.

We encourage our customers, suppliers and other stakeholders to support and assist us with our commitment.

CASAIR will endeavour to:

- ✓ Continuously improve our environmental performance by regular surveillance audits and inspections.
- ✓ Always comply with relevant environmental legislation.
- ✓ Use aircraft maintenance, engineering and operational best practices to minimise our impact on the environment.
- ✓ Maintain all equipment consistent with the latest revision of the manufacturer's data.
- ✓ Operate our fleet of aircraft in a manner consistent with our environmental principles.
- ✓ Effectively manage significant environmental impacts and co-operate with other stakeholders regarding significant environmental impacts.
- ✓ Implement 'Reduce, Reuse and Recycle' wherever possible.
- ✓ Continuously involve all personnel in the education and review process.
